

# thermo**FORM**

## Care & Maintenance

Light Stains can easily be removed from Thermoform doors with warm soapy water and a soft cloth, care must be exercised to ensure no water is left on the door(s).

More stubborn stains can be removed with a cotton bud and methylated spirits directly onto the stained area, then use warm soapy water and a soft cloth to finally clean the area.

Abrasive Cleaners or Papers, Scouring Pads, Solvents, Thinners, Ammonia, Acetone, Turpentine, or any other solvents (other than those recommended) must not be used. Use of the aforementioned cleaning methods will void the warranty.
